Product description

Decision making ball - cryptocurrencies

The decision ball is a unique product that allows you to randomly make decisions related to investing in cryptocurrencies. It is ideal for people who are not sure what decisions to make when it comes to investing in digital currencies.

Inside the ball there is a randomizing mechanism that works by recalling one of the twenty available investment scenarios. These scenarios include various options such as buying, selling, holding or exchanging specific cryptocurrencies.

The decision ball is very easy to use. Just shake it to trigger a randomizer that will select one of the available investment scenarios. The user can then use this scenario to make an investment decision.

This product can be used by both beginners and experienced traders. The decision-making ball not only ensures that investment decisions are made easily and quickly, but also eliminates emotions and external influences that can influence decision-making. Works without using batteries.
